Assignment 02

Advanced Programming 2016/17,

Marko Tkalčič, Markus Gritsch

Free University of Bolzano

Assignment 02

- write a java application that works as a client for the provided server
- the server is run as (6060 is the port number and the address is either 127.0.0.1 or localhost)

```
java AssignmentServer 6060
```

- it sends at least five integers to the server as a string, separated by commas

```
...
out.writeUTF("234,34,76,5,87,8,654");
...
```

- receives the response from the server
- writes the sent integers and the server response in the text file results.txt
- the content of the text file should have:
  - the sent integers in the first line
  - the server's response in the second

```
234,34,76,5,87,8,654
102
```

Assignment upload

- submit
  - the Java code that solves the assignment
  - the result file

- ZIP file with name convention AP_201617_A-xx_studentID.ZIP
  - xx = assignment number
  - AP_201617_A-02_156243652431.ZIP

- through OLE: https://ole.unibz.it/course/view.php?id=532
- deadline 1 week:
  - next Wednesday 29. March 2017 at 23:59
